

Water Smacker Instructions

We now include a 32 oz clear plastic PET, lab grade, non-toxic bottle. You can also smack the 32oz. water bottle purchased at the local market. The plastic must be thin. PET clear plastic has the correct dielectric properties. Too thick of plastic will not work. Smaller bottles will charge, but more time will be needed to charge the water. No glass, aluminum or stainless flask of any metal will work, it can short the unit. Many are concerned about PET plastic as being toxic petroleum product, but is only in danger when expose to sunlight for long periods full of water. PET was designed to carry water for drinking. The clear PET plastic bottle we send with the unit, is designed for beverages and does not contain any petroleum residues.

BEWARE! Do not drink from the bottle after charging over night it will shock your lips with a static charge!!! If you put your finger in the water it **WILL SHOCK YOU!** **BEWARE,** pour the charged water into a drinking glass or another plastic bottle or cup. This is one way to know your unit is working, by getting a shock with your finger, when you touch the water, it will not hurt **BUT WILL** startle you!

Do a pH test on the store bought bottle of water. They are suppose to bottle the water at 7.0 pH, but shelf life at the local market can be 6 months and the water will lose the ph to more acidic level. With the provided reagent test drops, pour 2 tablespoons of the drinking water (10cc) into a glass and use 2 to 3 drops and mix/shake and notice the color, to the chart below. Next charge the water and test in 8 hours from now. (over night) You will see the pH go up 1 to 2 units (6.0pH to 7.0/8.0 pH), if you leave it for another day, the pH reading will go up more .5 to 1 level more.

WATER You can smack your favorite brand of bottle water. Do a pH test before and after the smack test, over night charge of 8 hours is enough. Two days give a stronger shock to your finger touching the water in the plastic bottle. Pour water into a drinking glass after smacking the water. We recommend to use water from a R.O filtered water (reverse osmosis) or your own spring water. We sell a 5 stage RO unit for \$200.00, the yearly replacement filters only cost \$10.00 Watch out cheap RO water units charge \$100 to replace the filters. Never buy store bought water again. Charge your water continually. Tested spring/well water is another good source, if your water does not have to many contaminants, the

charge will only increase the contaminants! Filtered spring/well water is best. Another way to make distilled water is with a homemade SOLAR WATER DISTILLER. Learn to make clean drinking water from contaminated water by condensation under window glass. DO NOT USE MUNICIPAL TAP WATER!!! It contains chorine and fluoride and other chemicals that can increase in toxicity, with the smacker.

Pour the smacked water from the plastic PET bottle into a drinking glass or my nalgene canteen I take with me in the car for the day. If you leave a little water in the plastic cup and fill to the top and charge it again, it will charge faster. Plan to continually charge water for the next user, family member.

The unit will NOT short. The circuit is protected from shorting. Do NOT touch the cathode on inner aluminum shielding inside the tube, while ON, it will give you a static shock. The WATER SMACKER should work for years to come. To test if the Water Smacker unit is working, place a long screw driver with an insulated handle. Turn on the WS, and place the long metal screwdriver or round file, inside the resonant chamber, touch the alum. sheeting deep inside the tube and move the middle of the screwdriver near the handle to the center SS rod, as you get close to the SS rod, about 1/4" away, it will show a blue spark and you can hear the static pulsing. It can not short. The spark will show the unit is working and ready to smack some water.

We offer a 2 year warranty. Bob says the circuit cannot short and should last indefinitely. **WaterSmacker.com** Contact us **805-995-4809**, **info@watersmacker.com**
