

# Water Smacker!

## OPERATING INSTRUCTIONS

Introducing the  
**Water Smacker**  
by Bob Boyce®

Updated 10/2020

*Natural & negatively charged non-Hertzian healing water in your own home.*

Welcome to the Water Smacker and a new world of smacked water! Please read the instruction and information before charging your first bottle of water. Each Water Smacker comes with a 48 oz. or 50 oz. clear plastic laboratory grade non-toxic PET bottle. PET plastic will NOT leech petroleum chemicals into your water. You can also smack water using 32oz to 52oz. PET using PET quality water bottles purchased at the local market. Look for the PET or PETE imprinted in the plastic on the bottom of the bottle, along with a triangle with a 1 inside (means it's recyclable).

Commercial water bottles that are PET and good for smacking water are listed on page #2

# Water Smacker!

Store bought water bottles that are PET & good for smacking water are: Trader Joe's 50.7oz alkaline water blue Smart Water bottle 50 oz. • Evian tall 1.5L bottle Crystal Geysler Spring Water 1.5L also called Clover Valley Spring Water from the Dollar General • DejaVu blue 48 oz.

We recommend you have 3 or 4 empty back up bottles for charging. Never use glass, aluminum, stainless steel or any metal for charging. It may damage the Water Smacker resonance chamber, and prevent the water from charging properly, voiding the warranty. Do NOT pour charged, smacked water into anything metal such as a canteen, flask or stainless-steel coffee tumbler for drinking out of. Doing so will discharge the water quickly and you may receive a small static shock that is conducted by the metal. Do not use smacked water for tea or coffee as the boiling process will deplete the charge, turning your perfect micro sized water back to macro size water. Always pour charged water into a drinking glass or other plastic bottle or cup.

**HOW TO CHARGE WATER.** Rule #1 NEVER touch the Steel rod inside of the Water Smacker or the aluminum surface inside of the tube body. Plug Water Smacker into wall outlet. Fill the charging bottle with spring water, distilled water or AquaPure or Berkey filtered water. The first charge should be for 48 hours for the original Water Smacker and 24 hours for the Dual Powered PRO model Water Smacker. After the initial charge time, you may pour charged water into a plastic or glass container and drink. Get into a routine of changing out a charged bottle of water with a fresh bottle every morning or evening. Store the charged water in the charging bottle with cap in the refrigerator.

Start another bottle of water every 24 hours to keep a continual supply of charged water. Smacked water will stay charged for about 3 days. The micro clustering starts to decay after 3 days. Best to drink the first day.

## HOW TO CHARGE WATER FASTER

After the first charge of 48 hours, pour out 8 oz. to 16 oz. of smacked water into your drinking glass and refill the charging bottle with new water (never use tap water) and return to Water Smacker. Leaving charged water in the charging bottle will keep the charge going 24/7. Water Smacker only uses 1 to 2 watts of power to run so you can run it 24/7. For maximum micro clusters recharge water for 24 hours to receive full benefits. If you ordered a “Dual Powered PRO Model WATERSMACKER” the initial charge time is 24 hours and subsequent charges of 12 hours are only needed for fully micro clustered water. Fully erased memory in the water.

NEVER drink from the “charging bottle” because the charged water inside the bottle will deliver a mild static spark to the lips. The static spark in the water is how the Water Smacker got its name. The (+) to (-) static spark jump is one way to know your Water Smacker is doing its job. The static shock will not hurt you but it may startle you! The outside of the PET bottle is (+) and the water inside is (-). We are mostly acidic (+), so the spark jumps from (-) to (+). Once your body takes on the (-) negative charge, the spark can go away.

## TYPES OF WATER

Store bought spring water, distilled water, water filtered using AquaPure or Berkey, reverse osmosis filtered water works best in Water Smacker.

# Water Smacker!

## RECOMMENDED BRANDED WATER

Crystal Geyser, Clover Valley, Deer Park, Fuji and Evian are highly recommended as the best waters to use. Spring and distilled water from chain stores brands like Safeway, Giant Food, Rite Aid, Albertson's, Walmart are acceptable but only if the location of the source of the spring water is printed on the label and no additives in the water.

Corporate, bottled, purified water that is processed through Reverse Osmosis (filtered water) by Coke (Dasani) and Pepsi (Aquafina) and Smart Water all have chemicals added for taste. Do not smack the chemical water as the smack process can make these chemicals more harmful to your body. Some of these additives include, magnesium sulfate & potassium chloride. Smart Water has a pH of 6.0. After smacking Smart Water for 24 hours, the pH. only got up to 6.8ph and it tasted strange. Deer Park Spring water had the highest pH lift after 24 hrs. There tends to be more ORMUS in spring water.

## DISTILLED AND REVERSE OSMOSIS WATER

Distilling water causes it to lose all chemicals and metals but the water still retains ORMUS elements, monoatomic gold, silver and platinum metal groups in a sub atomic spin state. Smacking distilled water brings LIFE back into filtered distilled water and enhances the ORMUS elements. The Water Smacker process restores the natural frequency of the Earth into your water using a low sub bass tone, below our hearing range.

**TAP WATER** Pure municipal tap water should NEVER be used in Water Smacker.

Filtered tap water can be used if it has been processed using an Osmosis counter top or under the sink water filter system. Hydrogen Garage sells them in our store with replacement filters reasonably priced at \$15.00 per set of three or \$75.00 for five filters. Each filter lasts one year. Smacked water tastes better because the Schumann frequency (7.5 to 8.0) is in the water in the same way it is in nature. The Water Smacker's resonance chamber will erase the memory of the smacked water, meaning it has erased all frequencies in the water and has now put the low sub tone hum of the earth's frequency back into the water. The micro clustered drinking water can now take on the vibe of your environment. If you pray over the glass of water hold it to your breast and give the water thankful good vibes from your heart chakra. Thank you Lord for this wonderful living water I am about to drink, I pray it kills all (+) pathogens that cause cancer and disease. Dr. Emoto proved that micro clustered, structured water will take on your feelings of good or bad, due to the water in it's new environment.

## TRAVELING WITH WATER SMACKER AND TSA

At the airports, TSA may not allow you to bring smacked water through security. However Water Smacker owners have reported no problem taking their machine through security. You can pack Water Smacker in a carry on tote or packed in your luggage. If questioned you can tell TSA it is a water treatment machine. If you are traveling by car or other transportation, smacked water will stay charged for up to 3 days in its charging bottle. From the time the charging bottle is removed from Water Smacker the charge begins to slowly dissipate. For best results and to get the full effect, it is best to drink smacked water right away. Suggested reading "Negative Hydrogen For Positive Health" and Bob Becker's book "The Body Electric."

# Water Smacker!

## CLIMATE AND HUMIDITY

In warmer climates you may see moisture and condensation inside the Water Smacker tube and along the outside of the bottle. This is normal and not uncommon. When not in use, lay the Water Smacker on its side to dry out. To allow more air flow inside the chamber, Gen II Water Smackers have two small holes drilled in the top & bottom coupler for air ventilation and does not diminish the smacking process or quality of water produced.

### NEON LAMP TEST

A "Neon Tester Bulb" is included

The Water Smacker was designed and built to charge water for years to come. With every Water Smacker we provide one neon test lamp. The lamp test tells you that your Water Smacker is charging properly. **TEST PROCEDURE :** Flip the unit upside down, so you face the end of the stainless steel rod. No bottle inside. The neon test bulb has two wires with bare ends. The test neon bulb are non-polarized, which means it does not matter which end you use. Take one side of the neon bulb's bare wire and touch it to the aluminum inner lining on inside wall of the tube. Take the other end of the neon bulb wire and with your other hand holding onto the insulated wire, move the bare end of the wire closer to the end of the stainless-steel rod. When the wire end comes within  $\frac{1}{4}$ " to  $\frac{1}{8}$ " from the rod, you should shall see blue sparks and hear a buzz and the neon lamp will start to glow. A mini spark show. Test in a dark closet for best results. If you accidently touch the SS rod. it will not short out the unit. It may startle you.

This test demonstrates that Water Smacker is working properly. If you want to see a bigger spark and more of a lamp glow, take off your rubber sole shoes before doing the lamp test. You will be more grounded to the Earth and the neon lamp will glow brighter. The same goes for the water smacker shock test, the more ground you are the stronger the shock. The earth is apart of the non-hertzian circuit. As long as the neon lamp glows, the unit is working and ready to smack some more water. PLEASE NEVER INSERT ANY METAL OBJECTS INSIDE THE RESONANT CHAMBER WHILE IT IS TURNED ON OR OFF! IT CAN SHORT OUT THE UNIT & void the warranty.

If the green led light does not come on, you may only need a new 12v transformer box. Hydrogen Garage will replace any wall socket transformer within 2 year of the date of purchase. Any 12v wall wart with a three prong plug, 240/120v to 12v DC transformer x .5 amp to 2 amps will work. A three prong grounded wall wart transformer is a must, and your home or office must have a grounded outlet. Some older homes have 3 prong plug ins, but the ground wire was never installed, this can short a wall transformer to short out, over time.

For cancer patients, drinking negatively charged smacked water will help raise their body's blood pH , that will help prohibit cancer from growing. Cancer will only grow in a (+) acidic body. Many with cancer have slowed down or stopped the cancer growth from drinking negative charged, alkaline, micro- clustered and structured smacked water.

Water Smacker and Water Smacker Pro are NOT A MEDICAL DEVICES. <http://watersmacker.com/terms.html>

# Water Smacker!

**MICRO CLUSTERED & NEGATIVE CHARGED DRINKING WATER**

The Water Smacker and Pro model come with a 2 year warranty. For any reason, you can send it back and we will refund the purchase price minus the postage cost. The Water Smackers circuit cannot short and should last indefinitely. The only part that may need to be replaced after several years is the 12v wall socket transformer. We can get you a replacement. The PET plastic breaks down over time is biodegradable. The charge bottle will only last about a year. They become brittle and may leak. Buy more charge PET bottles at the local market. Water Smacker only draws 1 watt for the standard Water Smacker and 2 watts of energy for the PRO model.
